URBAN

Connecting urban green: paths for animals, spaces for people

Have you ever wondered how a squirrel crosses a busy road when the trees don't connect? How do hedgehogs find food when they are trapped in a fenced-off garden? How do bats find insects when they are disoriented by light?

URBAN, standing for Urban Animal Network, pilots bridges, road crossings and wildlife-friendly lighting to find solutions that help wildlife move freely and safely in our cities. By fostering co-existence between people and the animals that share their space, the project helps wildlife find its way through the city again.
