Green SKHy: building skills to drive the hydrogen transition

The shift to hydrogen for a greener energy supply needs more than technology – it needs skilled people. Through Green SKHy, trainers, teachers and industry experts are learning so they can train others in return.

In Spa-Francorchamps, specialists from Belgium, France, Germany and Luxembourg recently met for a hands-on hydrogen mobility training. By strengthening those who teach, the project is speeding up the workforce Europe needs for a clean hydrogen future.
